Digital Payment Technologies Announces Integration with ParkTrak

Parkway of Philadelphia, PA, is first client to integrate DPT's SHELBY pay stations with ParkTrak handheld ticketwriters

Vancouver, B.C. - Digital Payment Technologies Corp. (DPT), a manufacturer of multi-space parking pay stations and online management systems, and ParkTrak Inc., a leader in the field of Parking Ticket Management solutions, have teamed up to provide wireless integration between DPT's parking meters and ParkTrak's handheld enforcement devices. This integration is the third partnership of its type that DPT has announced over the last year and provides municipalities, universities, and parking operators with more efficient enforcement operations while increasing the accuracy of citations.

Customers with DPT's LUKE or SHELBY multi-space parking meters and the ParkTrak Pro Enforcement System can now have parking space information transfer from the pay station into handheld ticketwriters via a wireless Internet connection in real-time. Enforcement officers no longer need to go to the pay station to print a report on valid and expired spaces and can check the status of a parking space immediately before issuing a citation.

The first installation of this integration is taking place with Parkway Corporation, headquartered in Philadelphia. Parkway has more than 70 years experience in the parking and real estate development industries with nearly 100 locations totaling 30,000 parking spaces in nine major markets from Jacksonville to Toronto. For the last five years, Parkway has been operating 18 pay stations in 13 parking lots with support from DPT's reseller in the area, Richard N. Best Associates, Inc. In 2008, Richard N. Best Associates Inc. contracted with Parkway to upgrade all DPT meters to the newer SHELBY multi-space meter. The upgrade took place to provide Parkway with the credit card data security required by the Payment Card Industry (PCI) Data Security Council and provide a more advanced platform to integrate with third-party technologies like ParkTrak's handheld ticketwriters.

"Parkway has been working with ParkTrak's ticketwriters and DPT's parking meters for several years now," comments Parkway's Mark Hampton. "We believe the integration between these two industry leading technologies will make our operations more efficient while improving customer service and increasing revenues."

"Our ability to integrate our technology with the DPT parking meters provides our mutual client base with significant advantages in Pay-by-Space operations," states ParkTrak president, Craig Bagdon. "As DPT and ParkTrak have a significant overlap in our client base, we expect to see a number of clients come on board with this value-add service very soon."

About ParkTrak Inc.:

Delivering parking solutions since 1992, ParkTrak, Inc. has over 17 years experience parking cars in municipal, commercial, and institutional settings. We are the industry leader in providing handheld and portable parking solutions and are proud to feature the world's first handheld unit with imbedded License Plate Recognition. About Digital Payment Technologies:

Digital Payment Technologies is an innovative leader in the design, manufacture, and distribution of electronic parking meters, management software, and online services for the multi-billion-dollar parking industry. The company's products provide complete financial tracking, control, and reporting on parking revenue collected by cities, municipalities, universities, parking management companies, private operators, and national parks, from customer payment through to bank deposit. In 2007, DPT was named Emerging Company of the Year by the British Columbia Technology Industry Association and placed on Deloitte's Technology Fast 50 and Fast 500 lists for the second year in a row as one of the fastest growing high technology companies in Canada and North America.
