

## Permit Management

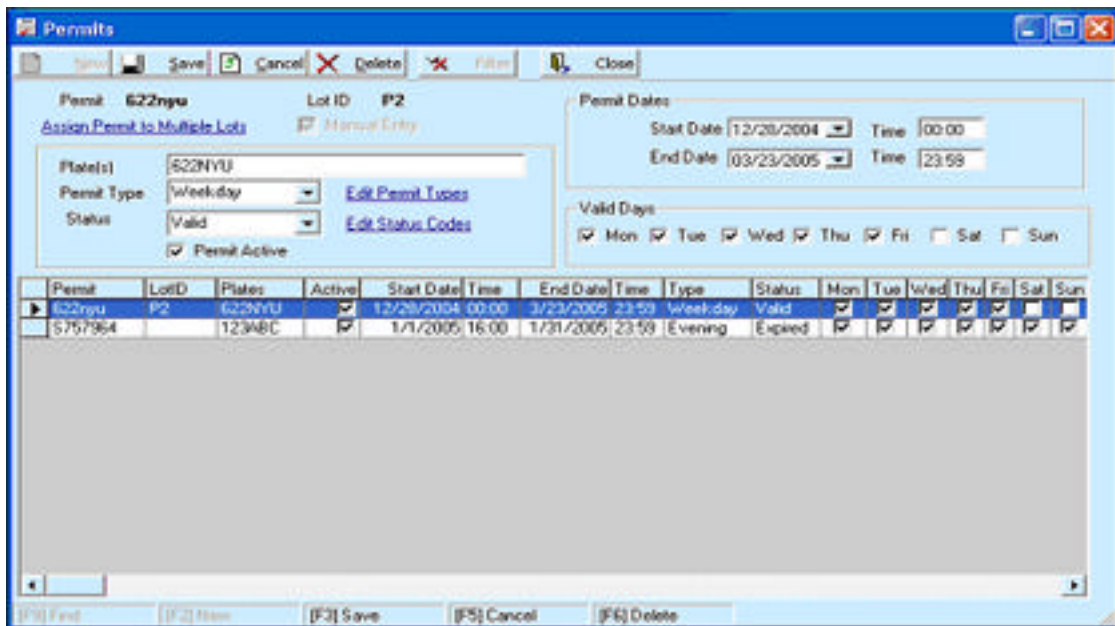

Gone are the days of having to issue a permit or hangtag every month or term and then have to hope that visual inspection will give you a proper audit. We are all well aware of the problems presented with these visual permit processes; counterfeiting, high cost of fulfillment, employee fraud, and inflexibility. With the addition of License Plate Recognition and Bar-Code Recognition to the ParkTrak Pro product line, we can make that monthly permit a thing of the past, while providing superior audit capabilities.

### LPR & Virtual Permitting

When using a unit with License Plate Recognition technology, permits can be completely eliminated. Cars are simply registered by license plate number. The handheld unit has built in logic to handle multiple vehicles on a single "permit", thus eliminating the dreaded permit transfer problems with traditional hangtags.

## Flexibility

Now you are no longer bound to such arbitrary blocks of time for permit issuance like “April” or “Spring Semester”. Your imagination is the only limit to assigning valid time periods when “Permits” can be used. Used much like a key card, a permit can be valid for as little as 10 min, or as long as 10 years. It can be valid only on Tuesday evenings, or Saturday and Sunday mornings. It can be valid for one lot, several garages, or the entire city. The control is yours.

## Integration

We know that most of our users already have some sort of parking management program in place. That is why we have designed our parking management module with open architecture so it can interface with many existing permit management platforms. ParkTrak Pro interfaces with both off the shelf products, like PARIS by IntegraPark, as well as proprietary systems, such as those maintained by the major commercial parking operators.

## Web Services

ParkTrak Pro's Permit Management module is also designed to work with web services for customer interface, such as permitparking.com. This allows your customers to maintain their own accounts, thus saving your staff valuable time. Furthermore, this allows you the ability to set up recurring transactions for credit card debit or electronic funds transfer, these can automatically update ParkTrak Pro's permit management system, without human intervention.
