

ELECTRONIC TIRE CHALKING

WHY ARE YOU DOING THIS?

WHEN YOU COULD BE DOING THIS...

With ParkTrak Pro's handheld License Plate Recognition technology, a flick of the chalkstick is turned into a click of the trigger. Each click records plate, date, time, and location, while simultaneously comparing duration of stay, distance moved (if any), and scofflaw status. Officers are automatically prompted to issue a ticket when a vehicle reaches overtime status. Flexible software allows for an individual license number's total time duration to be calculated by stall, block face, street, programmable distance or zones. Added benefits include capturing a wealth of parker statistical data, and best of all electronic chalk marks... THAT CAN'T BE WIPED AWAY...
